Searching for material by subject
The research cycle

1. Decide which sources to use (e.g. databases, search engines etc.)
2. Develop your search strategy (search terms, combinations etc.)
3. Review your search results
4. Amend your search strategy and / or choose different sources
5. Use the bibliography of relevant items to identify other useful papers and search terms

The cycle then repeats.
Searching by subject

An example:

Human rights of child asylum seekers
Searching by subject

An example:

Human rights of child asylum seekers

Finding bibliographic databases

Databases A-Z

(https://libguides.bodleian.ox.ac.uk/az.php)

• A-Z listing all databases
• Choose Subject tab
Finding bibliographic databases

Look for database type “Abstracts/Indexes”
Subject searching for journal articles in SOLO

SOLO Articles or Search Everything great for searching for **specific items** – though it doesn’t include all articles available online or those only available in print.

Articles or Search Everything can be used for subject searching at undergraduate level...at postgraduate level use a bibliographic database.
Subject searching for books in SOLO

Index/Abstract services sometimes (but not always) cover books

SOLO is a **good source** for subject searching for **books**

Use your normal search strategy but remember books often cover more general topics than articles so you may need to use broader search terms.

NB, make sure you are searching **All Libraries/Collections** and **NOT** Search Everything – otherwise you will get too many results!
Finding items from ‘one good record’

Once you have found relevant items – use details to find “subject headings”

You can then search using the subject heading OR browse the subject list on SOLO
